■ BETAPRIME[™] 5504G NO SHAKE

Adhesion Promoting Primer

BETAPRIME[™] 5504G NO SHAKE is a one-step primer with short open time, which can be used without silane wipe pretreatment. Advanced formulation which eliminates the need to shake primer bottle to disperse sedimentation before primer application.

It is a multi-purpose adhesion promoting primer for laminated glass with enamel layer inside, enamel substrates and plastic substrates for the glass replacement process. Compatible over a wide spectrum of substrates. On glass without enamel layer and no trim coverage, durability will be limited due UV degradation. To be used in combination with DuPont PURadhesives/sealants.

All Dupont T&I Adhesives products are primarily developed in co-operation with the automobile manufacturers, according to their needs and their specifications, they are approved for the specific applications as defined by the customer. The use of the product other than approved application must be released in written form by the Technical Service of DuPont T&I Adhesives.

Product information

Colour Basis Pigments Density Solid content	Black Polyisocyanates Carbon black 930 - 940 35 - 42	- - kg/m³	ISO 845
Rheological properties Viscosity, 4mm, 550 kPa, 3 days 40°C	11 - 12.5	S	
Application technique Open time Processing temperature	0.03 - 72 0 - 40

BETAPRIME[™] 5504G NO SHAKE

Adhesion Promoting Primer

Storage and stability

Shelf life

9¹ months

1: Shelf life is assured at +5°C to +25°C in unopened containers. Short term storage temperatures: 0°C to +40°C. Minimum shelf life upon dispatch from DuPont production location.

Processing

Adhesives

Caution: The product is extremely sensitive to humidity. It is imperative that container should be closed immediately after use, in order to extend durability of the remaining primer contents.

Reactivation

One-time reactivation possible from > 3 days with BETAPRIME[™] 5504G maximum open time 15 minutes.

Shelf life after opening

The pot life after opening of the bottle depends on the ambient climate and the application process. High temperatures, high ambient humidity and repetitive opening of the primer bottle reduces the pot life. The primer needs to be well applicable, the primer layer needs to homogeneous with good wetting of the substrates and the viscosity of the primer may not compromise the application process.

Processing equipment

Primer applicator, primer application device (flask with primer applicator head and felt) or automatic primer application system.

Surface preparation

All bonding surfaces must be free of dirt, dust, water, oil and grease, release agent and similar contaminants. Verify compatibility before use or consult our technical service department.

Cleaning

Clean equipment with BETACLEAN[™] 3000.

Safety instruction

The use of bonding agent (primer) is generally harmless and as long as the basic rules for safe handling of chemicals are applied. However, the direct contact of uncured primer to food and food containers shall be avoided. Mandatory are protective measures in order to prevent direct skin contact as well as to avoid solvent inhalation. Proper ventilation should apply when using primers with high volatile content. If any primer is applied in the means of spraying technique, special care should apply in relation to respiration and personal protection in order to prevent aerosol inhalation. Suitable solvent resistant rubber gloves, conventional eye protection as well as appropriate type of respirator mask are essential. In case of direct contact with any primers the skin must be rinsed first with warm water and then cleaned thoroughly with conventional soap. Solvents shall be avoided. For detailed protective measures refer to the material safety data sheets.
