Engineering Adhesives **2022**

Bostik Born²Bond™ Engineering Adhesives enable manufacturers of audio equipment to design and produce durable, reliable and high-performing products that are also easy to maintain and repair.

'BY THE DOT' APPLICATIONS

Strong, flexible, fast curing and available in multiple viscosities and pack sizes for manual or automated dispensing, these solutions are ideal for high-precision '**by the dot**' applications and bond to all substrates used in the manufacturing of audio equipment such as plastic, metal and rubber.

They also offer excellent environmental resistance, making them the optimum choice to withstand shocks, vibrations and resonances typically found in professional and consumer audio devices and systems, microphones, hearing aids and automotive applications such as in-car entertainment.

In addition to their high-performance properties, many **Born²Bond™** solutions are low blooming, low odor and low VOC, meaning manufacturers can offer safer working conditions, maximize throughput and reduce costs – all without any compromise on design, aesthetics or sound quality.
